

W Box – How to guide

ISSUE – The camera appears Black & White (The latest generation of W Box HDoC cameras are default set to AHD)

Products:

DVR – W Box WBXRA041 "E or F series" (Used in this example 'F' series)

Camera – W Box 1MP HDoC (1280 x 720).

NOTE – "E & F series" DVR's only support maximum 1MP & Standard analogue camera only.

1. When you first connect a New Generation W Box HDoC 1MP (1280 x 720) camera to the DVR the image will appear Black & White. (This is because the New generation camera is default set to AHD and the DVR is TVI only.)

2. To ensure the camera displays colour images via the DVR is a very simple process. To change the camera to TVI simply use the joystick toggle switch on the fly lead of the camera. The yellow label illustration shows the direction to select one of 4 settings. Hold the joystick toggle switch to the right ('T' on the yellow label) for 5 seconds.

3. You will now find your image has now switched to colour.
